VACMASTERS Air-Vacuum Excavation Systems

If your business is potholing, we have an air-vacuum excavation system to power your business, and if your job is to expose utilities, that same air system will blow away potholing with water.

Make your work easier, more cost-efficient, and a lot less risky for operators and buried utilities by potholing with air. You can dig effectively in any kind of soil and the spoils stay dry for easy vacuuming and backfilling. Additionally, air won't harm the road base or the utilities you are exposing, and it is non-conductive. VACMASTERS has an air-vacuum excavation system designed for your type of potholing work and all have water on board as a backup.

CHOOSE FROM THE FOLLOWING SYSTEMS:

SYSTEM 4000: Our largest, most powerful system, delivering groundbreaking performance in rock-hard soil.

SYSTEM 3000: Mid-sized, compact, powerful, and highly maneuverable on a heavy-duty 1-ton chassis. Dig a 12" x 12" x 5' deep pothole in 7-8 minutes.

SYSTEM 1000: Low cost, small size, skid-mounted for trailer or truck installation. Our most affordable air-vacuum excavation system.

Stop wallowing in the mud and join the VACMASTERS Air Force. Hundreds of companies around the world have discovered VACMASTERS and the power of potholing with air. See our demo online at www.vacmasters.com and take a virtual plant tour, or call or e-mail us.
