

# Groundbreaking Performance in Rock-Hard Soil!

*Save Time, Money, and Effort With the World's  
Most Powerful Air-Vacuum Excavation System...*

## **VACMASTERS SYSTEM 4000**

Pothole like never before...with supersonic air...in any kind of soil, no matter how hard, wet, sunbaked, or compact, including clay and ground frost. The **VACMASTERS SYSTEM 4000** has fifty percent more power than its predecessor. It forces high-pressure air at 220 psi into the soil's microscopic cracks, crevices, and fissures, building pressure that explodes the soil from within. The SYSTEM 4000 allows you to dig with air in difficult soils faster than ever before. It won't harm costly underground utilities or your bottom line because you'll be potholing more efficiently and *much* more safely.

**The SYSTEM 4000 is:** ***Fast***—pothole in 7–8 minutes average. ***Safe***—for operator and buried utilities. ***Efficient***—spoils stay dry for backfilling. ***Economical***—no mud hauling, disposal costs, or return with backfill. ***DOT Friendly***—won't harm road base.

*Stop wallowing in the mud and join the VACMASTERS Air Force. More than 500 companies around the world have discovered VACMASTERS and the power of potholing with air. See it for yourself at [www.vacmasters.com](http://www.vacmasters.com) where you can view our demo online.*
