

POWER

Power Means Performance.

Performance Means

PROFIT!

Introducing **VACMASTERS** **SYSTEM 5000**

Incredible power, features, and efficiency all come together in one of our most versatile systems ever.

- **Mighty** — dig a trench
- **Tough** — pothole in record time
- **Powerful** — open up larger areas

VACMASTERS has been the leader in air-vacuum excavation for more than three decades. We pioneered the technology for a safer, more economical way to pothole, eliminating the risks of personal injury and utility damage associated with digging with high-pressure water and the resulting need to haul away muddy spoils and return with dry backfill.

Dig a pothole of any size in record time, breaking up rock-hard soils with the 5000's supersonic compressed air. The system is easy to operate and the full-opening rear door means backfilling is fast and efficient. Its modest size and built-in storage allow a two-man crew to set up for digging quickly and stow equipment away in minutes when the job is done. The VACMASTERS SYSTEM 5000 makes sense both operationally and economically.
