

Introducing

VACMASTERS

SYSTEM **6000**

Pothole and Trench with Air.

The Benefits Will Blow You Away!

Never-before-seen power from the maker of the world's most powerful Air-Vacuum-Excavation Systems. The new VACMASTERS SYSTEM 6000 is the first air-vacuum excavation system with the power to trench as well as pothole. Designed from the ground up to:

- Lower your costs
- Reduce job site injuries
- Eliminate your damage claims

The VACMASTERS SYSTEM 6000 will help to increase your revenues and profitability by doing more work in less time than potholing with a hydro excavator and making quick work of trenching jobs where a mechanical system is not necessary or too cumbersome. It will do double duty at the same job site.

The SYSTEM 6000 uses supersonic air from our proprietary nozzle to penetrate, expand, and explode the soil from within while keeping it dry for easy vacuuming and quick backfilling. It will dig a 12"×12"×5' pothole in 3–5 minutes. It won't harm underground utilities and is safer for operators and crews.

When buried utilities are present, there's no faster and safer way to dig than *air*odynamically with the new VACMASTERS SYSTEM 6000.
